

# *Epic Arch Setup Instructions*

First, gather all your epic pieces.

Next, take two pieces of the arch and one connector. Place the connector over the arch pieces so the connector covers the split. Insert two bolts on each side.

After the connector covers the arch spilt, then insert bolts. After the bolts are inserted, flip the piece on its side and attach 4 arch dowels loosely.

Then attach the rest of the arch dowels loosely to the remaining holes with bolts in them.

Next, assemble the other side exactly the same.

After the other side of the arch is assembled, attach with the connector facing outward. Then attach with the dowels that are already on the other side.
